DESCRIPTION

T-cell acute lymphocytic leukemia protein 1 (TAL1) is a basic helix-loop-helix transcription factor implicated in the genesis of hemopoietic malignancies. It may play an important role in hemopoietic differentiation, including a positive regulation of erythroid differentiation. Diseases associated with TAL1 include leukemia, acute lymphoblastic and precursor t-cell acute lymphoblastic leukemia. A chromosomal aberration involving TAL1 may be a cause of some T-cell acute lymphoblastic leukemias (T-ALL).
